## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5-8, 10-15, 18 and 23-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese patent document 2000-269178 to Yamazaki et al. This reference teaches the basic inventive process where a barrier layer and a metal layer which are formed on a semiconductor substrate are sequentially etched to remove the layers from the edge of the wafer. See, for example, the discussion at paragraphs [00059] and [0089] of the reference.

In addition, this reference teaches all of the features of the dependent claims including, the use of nitric and hydrofluoric acid combinations [0059], removal of an insulating layer on the surface of the wafer [0004], the use of copper as the metal layer [0004], and applying the etchant to the backside of the wafer to remove unwanted material [0007] and Fig. 26.

In addition, the acids used in this reference would, of necessity, require the process be performed in a protected environment, as is common in the prior art methods which utilize gases for cleaning the wafer.
